Education

Indra Ganesan college of engineering

2019 – 2023

BE Computer Science and Engineering

Area of Interest

- Mobile app development
- Machine Learning
- Web development
- Game development
- Artificial Intelligence

Projects

A Forecast For Bike Rental Demand Based On Sklearn | *Python, pycharm, weather dataset sklearn*

- Implemented a bike rental demand forecasting system using scikit-learn for machine learning models. Developed the backend in Python for data processing and model training, and the frontend in HTML for user interface and data visualization. Integrated machine learning predictions into the web interface, allowing real-time demand forecasts and insights.

Pothole Detection using Machine Learning with Flask Framework in Python | *python, flask, vscode*

- Implemented a pothole detection system using a machine learning model to analyze and identify potholes from images
- Processed user inputted information in the back-end of the app to return a subtotal price based on the tickets selected.
- Utilized the layout editor to create a UI for the application in order to allow different scenes to interact with each other.
- Developed the backend with the Flask framework in Python to handle image uploads, process data, and return detection results.
- Integrated the machine learning model with Flask to provide real-time pothole detection and classification.
- Focused on efficient image processing and accurate predictions to improve road safety and maintenance.

Social Feed App | *Flutter, Dart, Firebase, vscode*

- Developed a real-time social media application with advanced functionalities and a modern user interface.
- Implemented a dynamic feed where users can create posts (text or images) and interact through likes, comments, and shares.
- Integrated Firebase Firestore for storing and retrieving posts with real-time updates using streams.
- Enabled image uploads and storage through Firebase Storage, with efficient rendering using `cached_network_image`.
- Designed an intuitive UI/UX with features like scrollable stories, post interactions, and a responsive layout.

Phone Authentication using flutter and firebase | *Flutter, Dart, Firebase, vscode*

- Implemented a secure and user-friendly phone number authentication system using Flutter and FirebaseAuth.
- Integrated Firebase Authentication to enable phone number verification with OTP input.
- Designed a clean and responsive UI for entering phone numbers and manually entering OTPs
- Validated user inputs to handle invalid phone numbers and incorrect OTPs.
- Handled OTP request limits, verification failures, and session expiration scenarios gracefully.
- Ensured smooth communication between the app and Firebase backend for real-time authentication

Technical Skills

Languages: Python, Java, HTML5, CSS3, JavaScript

Developer Tools: VS Code, Sublime Text, Pycharm, Android Studio

Frameworks and Libraries: Flutter

Achievements Awards

- Java Course - Mastering the Fundamentals
